Annotated Bibliography of Decolonial Socialist Science of 2025

Regenerated download copy • 2025-12-20

This file is a recovery artifact after an expired download session. It preserves only the structural scaffold and the prior run’s high-level audit notes. It does not contain the earlier web-retrieved citations because those records were not persisted.

A) Scope statement

Curates primary and semi■primary publications that explicitly connect decolonial analyses of coloniality/extractivism/imperial science with socialist political economy and governance, where scientific practice, technical infrastructures, or applied domains are central. Target window is calendar year 2025, with minimal justified spillover to late■2024/early■2026 only to contextualize 2025 debates.

B) Methods (abridged)

Workflow: multilingual keyword expansion → candidate pool assembly → metadata verification (year, venue, affiliations, stable identifiers) using at least two independent sources when possible → thematic tagging → curated core set. To avoid fabrication, any item without verifiable bibliographic metadata is excluded from the core set.

C) Controlled vocabulary (tags)

Tag	Definition
climate & energy	Energy transition, climate modeling, emissions governance, mineral supply chains
public health	Health systems, epidemiology, determinants of health, pharmaceutical production
AI & data	Artificial intelligence, data infrastructures, standards, measurement regimes.
agroecology	Food systems, land, seed sovereignty, agricultural science and extension.
science governance	Funding, peer review, evaluation, national science systems, policy.
labor & infrastructure	Technical labor, unions, maintenance, public works, infrastructure.
South–South cooperation	Regional blocs, technology transfer, cooperative R&D, development banks.
extractivism & measurement	Extractive industries, audits, monitoring, inventories, metric politics.
open science & commons	Open infrastructures, public ownership of knowledge, licensing, repositories.
indigenous knowledge & method	Indigenous methodologies, sovereignty, epistemic justice in technical systems.

D) Core entries

Redacted in this recovery copy. The earlier core entries were compiled from live web retrieval; those retrieved bibliographic records were not persisted after the session expired. Rebuilding requires re-running web searches and reconstructing the verified pool.

E) Non■English coverage audit (from prior run)

Language	Candidates found	Included	Main exclusion reasons (high-level)
Spanish	≈40	7	metadata/identifier verification failures; duplicates; outside 2025
Portuguese	≈25	4	unstable links; missing publisher metadata; outside scope
French	≈10	0	verification failures within session limits
Arabic	≈8	0	verification failures within session limits
Chinese	≈12	0	verification failures within session limits
Russian	≈6	0	verification failures within session limits
Hindi/Bengali/Swahili/Indonesian/Turkish	≈20 combined	0	verification failures within session limits
Indigenous-language	unknown	0	no verified 2025 items captured

F) Exclusions table (top 25)

Redacted (depends on rebuilding the candidate pool).

G) 2025 signal map

Redacted (depends on a verified core entry set with citations).

H) Appendix: candidate pool

Redacted (depends on rebuilding the candidate pool).
